

## Sloper's Wartime Provisionals.

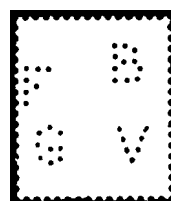

The subject of Sloper's Wartime Provisionals has interested Perfin collectors for many years. Charles Jennings, in his 'History of British Security Stamps (1968), acknowledges **Keith Ryner Young** as their 'discoverer'. Found predominantly on the dark and light coloured definitives of King George VI, they are characterised by the 'irregular' placement of the letters making up the required set of initials. In all Sloper Wartime Provisionals, more than one strike is required to make the requested set of initials, so examples of 2, 3 and even 4 separate strikes are known - see below. The suffix 'p' in the catalogue number indicates a Sloper Wartime Provisional.

2-strikes

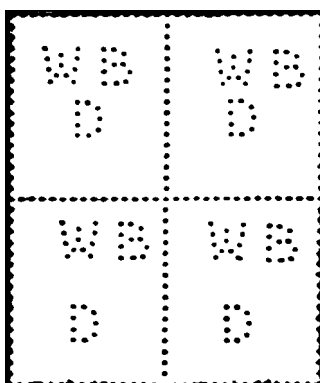

3-strikes

4-strikes

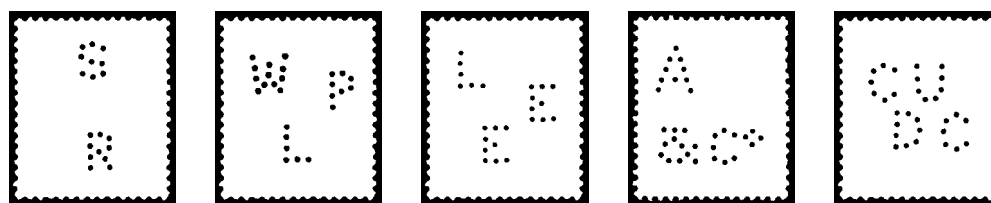

This variation in placement of letters can usually be readily seen in multiples such as the 2x2 block of "WB/D" (W0620.01ap), illustrated below. But there's more that can be gleaned from the block, for example the "WB" portion is constant on all four stamps, and in fact matches "WB" (W0410.01b). However, the WB's are 22.5mm apart on the top row, but only 19.5mm on the bottom row, which pretty much proves that the die used for the "WB" portion was *single headed*. The "D" on the otherhand is just a standard 4-pin high Sloper "D", probably D0009.01M (known to be multiheaded, 12x1), and each is 20mm away from its neighbour in the row, confirmation that the "D" portion was struck from a *multiheaded die*.

If we assume that complete sheets of stamps were involved, we know from this particular block that the operative responsible for initialling the order perfinned each of the 240 stamps first with "WB", which being single headed would have required 240 punches, but only 20 punches would be necessary from the 12x1 multiheaded "D" die, one for each complete row - in total, 260 separate punches. The saving grace is that up to 4 sheets would have been initialled at the one go, meaning that each of the 240 potentially unique patterns would have up to 3 more identical perforated stamps.

Early on in the 2<sup>nd</sup> World War, Sloper's Works in Budge Row (where stamp perforation was carried out) was 'Blitzed' during one of the many air raids on London carried out by the Luftwaffe. The air raid in question took place on the night of the 10<sup>th</sup> May 1941 and into the early hours of the next morning, resulting in the loss of virtually all of Sloper's 'in house' perforating dies. Sloper's Works in Hampstead, where the presses and dies were made as well as aircraft parts for the War effort, escaped the bombing.

Given the wartime shortages of manpower and materials, and the prevailing spirit of 'make do and mend', the simple remedy of improvisation using single letter (and later multiple letter) dies would have been an obvious short-term solution to the problem of keeping the stamp perforation business going. Patterns involving combinations of letters could still be produced by passing sheets of stamps several times through the perforating machine using a different letter at each pass. Inevitably, due to the very nature of the process, poor alignment and uneven spacing of letters resulted, and on odd occasions letters may be found to overlap. In extreme cases the final arrangement of letters was not as originally intended!

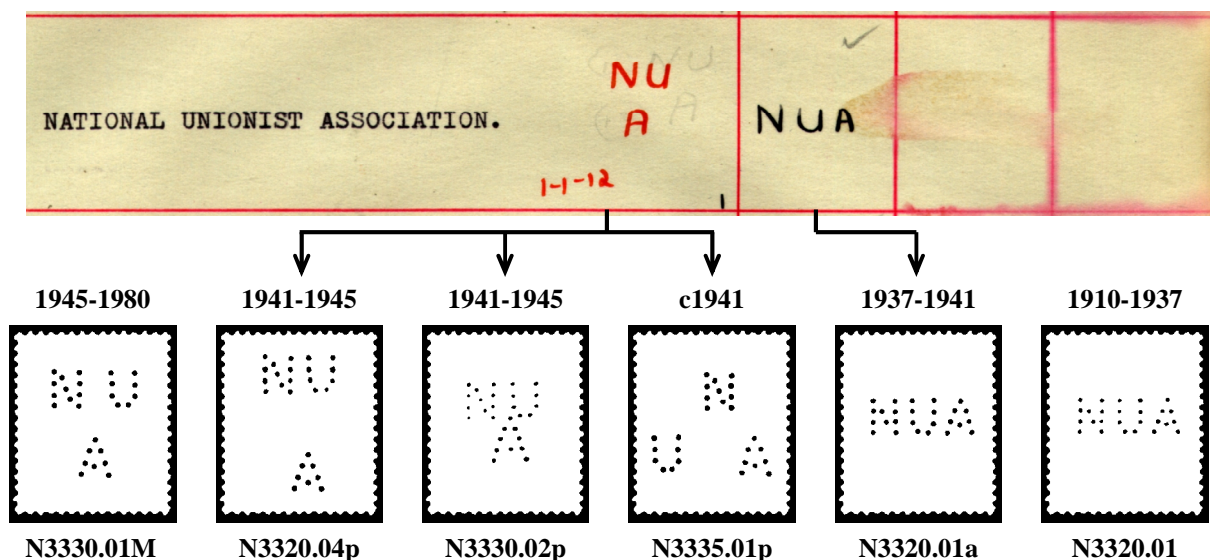

The illustration above shows five typical examples of Sloper Wartime Provisionals (SWP's for short). Notice the 'inverted' "S" in the first one, the 'constant spaced' "&C°", "CU" and "DC", and the 'mixed height' lettering using a 5-pin high "A" in "A/&C°". Note that the "S" can also be found as a 'normal' letter. Large, 5-pin high letters can be found for "A", "O", "Q" and "V", as well as their normal sized counterparts.

### Sloper's Manuscript Ledger.

Early in 1991 the Perfin Society was fortunate enough to purchase a number of Sloper's original ledgers. One of the volumes appeared to date to just before the 2<sup>nd</sup> World War, and in it are typed the names of customers together with the required pattern of letters in manuscript describing the die to be used. This ledger has subsequently been referred to as the 'm/s ledger'. Alongside the original entries are letter combinations and numbers which we can interpret as 'perforating instructions' for the 'provisional' Perfin patterns.

In the illustration below, taken from the ledger, but 80% reduced, we can infer that the "NUA" die (single headed from the figure '1' to the left of the first column) which was used to perforate stamps for the *National Unionist Association*, was destroyed in the "Blitz" on Sloper's premises in May 1941. As a result, subsequent orders for perforated stamps were to be accommodated by creating "NU/A" using a single headed "N", followed by a single headed "U", and finished off using a 12x1 multiheaded "A" die - hence the 1-1-12 configuration code to the left. Note that the old arrangement of three letters all in one line would have called for extreme precision when using three separate dies, whereas the new two-line arrangement would allow more room for the placement of the letters. In passing, the smudging of the red lines to the right of the scan occurs throughout the ledger and is thought to be the result of water damage, received no doubt in the immediate aftermath of the 'Blitz'.

The first "NUA" Perfin used by the *National Unionist Association* is known to have been N3320.01, which was in use 1910-1937. That would have been followed by another "NUA" die produced by Sloper's as part of their pre-WWII refurbishment programme - N3320.01a, in use 1937-1941. It is this short-lived die that would have been destroyed in the "Blitz". The instructions for SWP's were generally followed, although a number of varieties can be found, not least of which is the use of a large letter "A", and even "N/UA"! After the war, new 'regular' dies were made for Sloper's remaining customers, which for our particular study was "NU/A" (N3330.01M) - now in the possession of the Perfin Society. The latest known date for our subject SWP is the 2<sup>nd</sup> December 1945 on N3300.04p, and the earliest reported date for N3330.01M is the 7<sup>th</sup> July 1951. The start and finish dates in the 'Gault' Catalogue are down as c1945, although c1948 would perhaps be a better mid-range date.

## Period of use for SWP's.

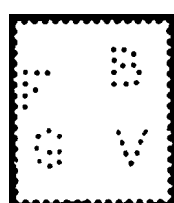

Examples of Sloper Wartime Provisionals with clear dates are hard to come by, but when found will generally lie in the range 1941-1949, giving a mid-range date of c1945. The earliest recorded to date is the 15<sup>th</sup> May 1941 on “**NB/IC**” (N0350.04p), and the latest is the 3<sup>rd</sup> July 1952 on “**K/CC**” (K0300.02p). However, it should be noted that the technique of using multiple strikes of different dies to create specific letter combinations had been put into practice by J Sloper & Co at least 5 years before their Works in Budge Row were damaged by enemy action - for example, see the sequence for “**FH/MB**” (F1830.01v/02v/03v/04v/05v) in the ‘Gault’ Catalogue. Note the use of the suffix ‘v’ to signify ‘variable’, in this case variation in the position of the letters on the stamp.

Unfortunately, no precise terminal date can be given for SWP's as they were replaced progressively throughout the 1940's, but at least two SWP's, “**CE/D**” and “**K/CC**” are known with dates in the 1950's. Also “**A/&C**”, “**LF**”, and “**WB/D**” are also known on Issue ‘S’ (GVI changed colour definitives) which puts them still in use after the issue date of the 3<sup>rd</sup> May 1951.

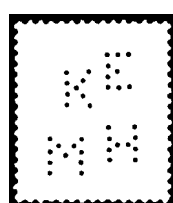

The same technique was also used by Sloper's well after the end of WWII, in the shape of “**BA/E**”, “**CB/B**”, and “**S/R**” which can all be found on the Winding issues of Queen Elizabeth II. As with “**FH/MB**” above, these also have the suffix ‘v’ to warn of ‘variability’.

## The Ultimate Provisional.

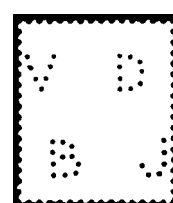

Having established that different letter combinations were produced by Sloper's using multiple dies, it would have been in their interest to minimise the time spent perforating the stamps. Clearly, the most labour intensive Perfins would have been those involving 4 letters, so four separate strikes. It probably comes as no surprise to learn that there are very few of these, all with the instructions ‘1-1-1-1’ - note all single headed dies, so a massive **960** separate strikes would have been needed to perforate a whole sheet of stamps, although probably 4 sheets at a time. J Sloper & Co made it a policy never to fold sheets of stamps, preferring to perforate each stamp with the monarch's head upright (barring the odd mistake). The ten ‘4-strike’ SWP's are “**BO/IC**”, “**FB/GV**”, “**KE/MH**”, “**MA/IA**”, “**NB/IC**”, “**NS/NQ**”, “**SB/GV**”, “**SB/SA**”, “**VD/BJ**”, and “**WE/AA**”. However, only “**FB/GV**”, “**KE/MH**”, and “**VD/BJ**” have been found with the unmistakable signs of all four letters having been struck separately, the remainder used either constant ‘letter pairs’, or were never produced (or if they were, none have survived).

K0690.01p

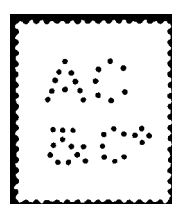

V0520.01p

## The Modified “PAC” Die.

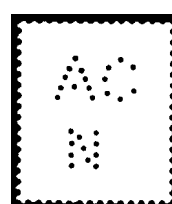

The entry in the ‘ms/ ledger’ against Acton Corporation reads ‘**AC (12) Converted PAC**’. This is documentary evidence that the “**AC**” die known as A1010.05M was produced by deliberately removing the “**P**” from an existing 12 impression “**PAC**” die to leave “**AC**” on its own. This also indicates that not all of the ‘in house’ Sloper dies were destroyed in the “Blitz”. Although the modified “**PAC**” die is not a SWP itself, it is known used in combination with other dies to produce four true SWP's - illustrated below.

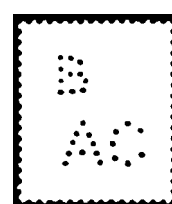

A1010.05M

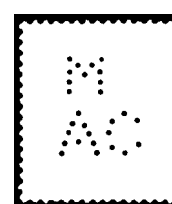

A1105.06p

A1240.02p

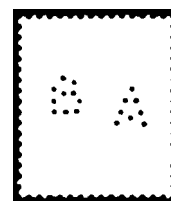

B0135.01p

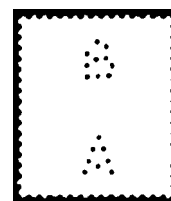

M0130.02p

### Pin Loss on SWP's.

An occupational hazard with Perfins is the loss of holes due to pin damage, although this seldom causes a problem in identifying the full Perfin. For example, the single letter "B" as used in the production of SWP's often has the top pin missing - see "BA", "B/A", "E/B", "LB/&C<sup>o</sup>", and many others.

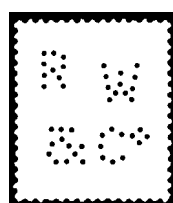

B0060.01p

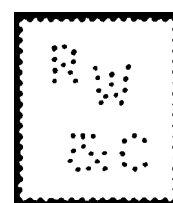

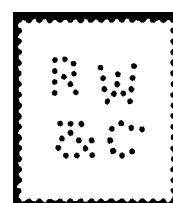

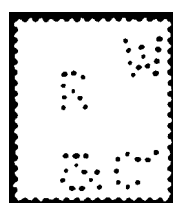

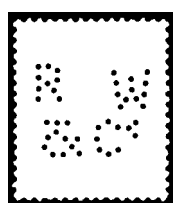

B0090.01p

However, an interesting sequence can be established with various pins missing from the "o" of "C<sup>o</sup>", to such an extent that examples can be found with all four missing! Such a sequence is illustrated for "RW/&C<sup>o</sup>" (R5690.04p), but something similar can be established for "CR/&C<sup>o</sup>", "HG/&C<sup>o</sup>", "HL/&C<sup>o</sup>", "HW/&C<sup>o</sup>", and many others. Note that the "&Co" portion of the Perfins was from a separate 12x1 multiheaded die, and so the missing pins are probably from different heads rather than progressive loss from just one of them.

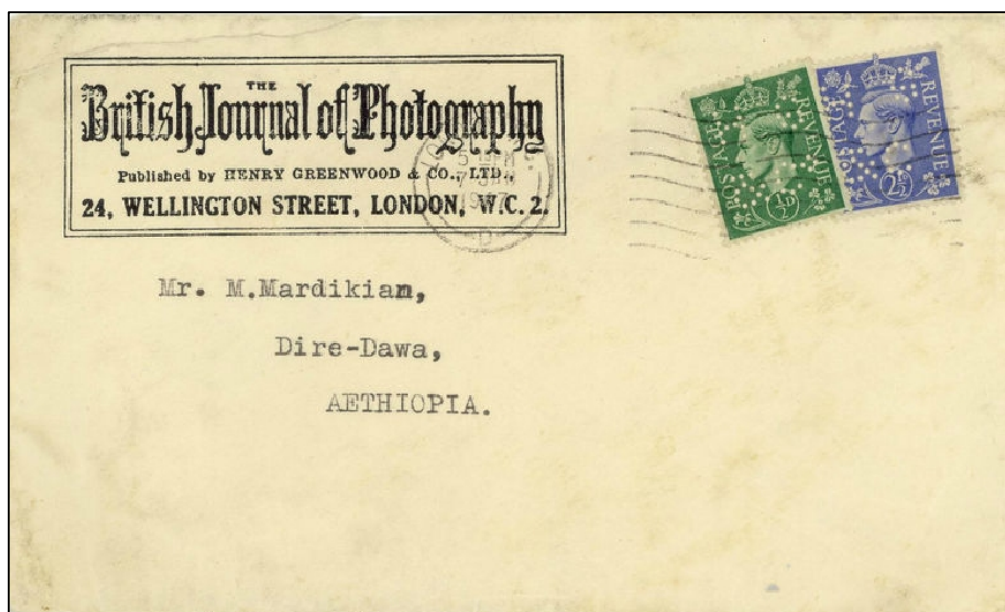

R5690.04p

R5687.01p

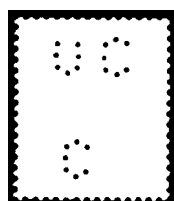

It also poses a question - 'was the "C" in the last Perfin in the line above intended to be a "C" or "C<sup>o</sup>"? That question was answered in October 2011 when *Jeff Turnbull* reported a new positive identity for both "HG/&C" (H2865.01p) and "HG/&C<sup>o</sup>" (H2980.01ap) - Henry Greenwood & Co Ltd. At least that's true for "HG/&C", but by extension it's also true for "RW/&C", "CR/&C", etc.

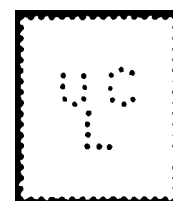

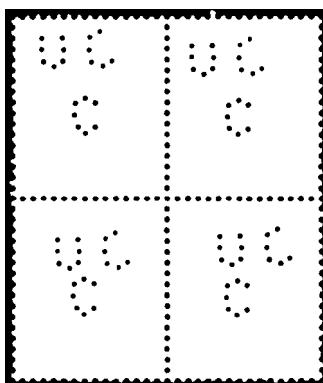

The cover, posted in London WC, on the 7<sup>th</sup> January 1947, has a 1/2d 'R' with "HG/&C<sup>o</sup>" (note a full complement of pins in the "o"), and a 2 1/2d 'R' with "HG/&C", so clearly this particular "&C" was intended as "&C<sup>o</sup>". Technically, as Catalogue Editor, I could legitimately combine the stamp information for "HG/&C" with "HG/&C<sup>o</sup>" as they were intended to be the same, but decided in the end to keep the two patterns separate.

Note - The "RW/&C<sup>o</sup>" sequence was the subject of an article in Perfin Society Bulletin N<sup>o</sup>. 408 (June 2017). As a result the sequence turns out to be a little more complicated than first thought, but the simple sequence above is sufficient to show the general principal involved.

On other occasions pins have been deliberately removed to create other letter combinations. Here we see the top pin removed from the “O” of an unknown “OC” die, for use in “UC/C” (U0400.04p) and “UC/L” (U0470.05p). The 2x2 block shows the “UC” portion was constant and single headed, and that the “C” was multiheaded, probably 12x1.

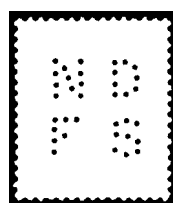

U0400.04p

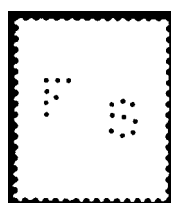

U0470.05p

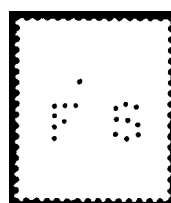

Interestingly, just one example of a SWP exists with an *extra* hole. It would appear that the regular die “ND/FS” (N1030.01aM) had the pins forming the “ND” removed to leave “FS” (F3680.01p). Fortunately for Perfin collectors, one of the heads still had a pin remaining in the “N” producing the variety “. /FS” (F3681.01). This new “FS” die was also used to produce “FS/W” SWP’s for the Fore Street Warehouse Co, and inevitably the head with the extra hole also occurs on the SWP “FS/W” (F3950.01p) producing the variety “. /FS/W” (F3951.01p).

F3680.01p

F3680.01p

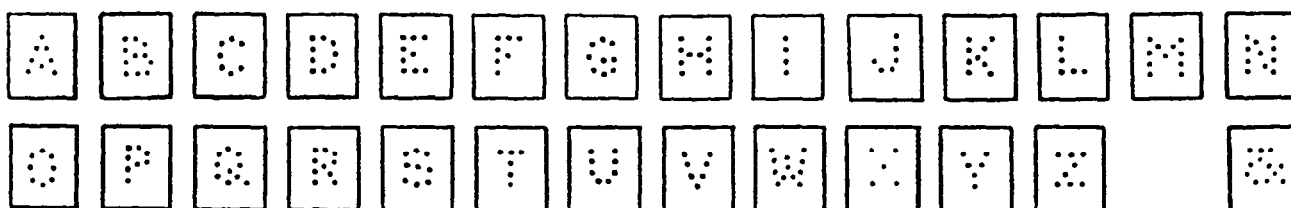

F3950.01p

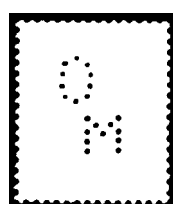

F3951.01p

## Notes on the Letters Used.

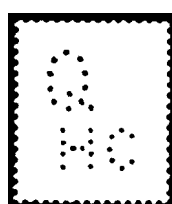

As outlined earlier, the majority of SWP’s were produced using letters from Sloper’s standard 4-pin high alphabet. The complete alphabet is illustrated below.

Of particular interest are the 5-pin high letters - “A”, “O”, “Q”, and “V”, and the unusually shaped U’s found on “CU/DC” (C7950.03p), “UA” (U0060.04p), and “UB/C” (U0230.03p), known to once have been a “W”.

Q0280.03p

D5060.02p

U0230.03p

This is the master list of *Sloper Wartime Provisionals* (SWP's) derived from information in the '*Gault Catalogue of G.B. Perfins*', with update information reported to the Catalogue Editor since publication of the individual sections. Since the original list of SWP's appeared on the Perfin Society Website (**1<sup>st</sup> August 2013**), there have been many additional postage stamp values reported along with changes in 'die in use' date ranges, dates, and new dies.

The following collectors have contributed new information since the original list:

***Michel de Beukelaar, Finn Binderkrantz, Kim Bjarnt, Jack Brandt, Terry Comper, Nigel Hall, Ian Hamill, Keith Kimber, Peter Maybury, Ron Mills, Thomas Mørkeberg, Steve Netten, Rosemary Smith, Richard Smolnicki, Gerry Soutar, Stephen Steere, Jeff Turnbull, and Barrie Williamson***

Latest totals are **783 DD**, involving **3,266 DDF**.

List & stamp details compiled by Roy Gault - Correct to **1<sup>st</sup> January 2019**.

The list that follows the colour illustrations shows the Catalogue Numbers and Letters involved for *all* known 'Sloper Wartime Provisionals', along with their die in use date ranges, earliest and latest known dates from actual stamps or covers, and a tally of the number of DDF stamps for each of the stamp issue code letters 'Q', 'R', 'S', and 'T'. Details of the *actual stamp denominations* are also shown in the listing.

Note - VLint = Van Lint Catalogue (1959), Tilles = Harvey Tilles Catalogue (1975),  
n/k = source not known.

DDF	Count		
<b>0</b>	10	1.3%	42.7% Rare
<b>1</b>	176	22.5%	
<b>2</b>	148	18.9%	
<b>3</b>	97	12.4%	48.4% Middle of the Road
<b>4</b>	84	10.7%	
<b>5</b>	55	7.0%	
<b>6</b>	54	6.9%	
<b>7</b>	38	4.9%	
<b>8</b>	30	3.8%	
<b>9</b>	21	2.7%	
<b>10</b>	11	1.4%	9.0% Common
<b>11</b>	18	2.3%	
<b>12</b>	15	1.9%	
<b>13</b>	9	1.1%	
<b>14</b>	6	0.8%	
<b>15</b>	2	0.3%	
<b>16</b>	3	0.4%	
<b>17</b>	3	0.4%	
<b>18</b>	2	0.3%	
<b>19</b>	1	0.1%	

The table above shows a simple tally chart of how many dies have '0' stamps listed against them, '1' stamp listed, '2' stamps listed, etc. The inference being that any die with a small number of DDF will be quite rare, whereas those with larger numbers are likely to be a little easier to come by. The divisions are drawn arbitrarily, feel free to put the dividing lines where you think fit and re-compute! For reference the die with **19 DDF** is "CK" (**C4110.01ap**).

The following figures show how many different dies are known on each stamp value. However, experience will tell you that the 1d and 2½d Dark colours, and the 1d and 2½d Light colours will feature most prominently. The rarist of the small sized issues 'Q' and 'R' is the 11d plum found on just 5 different Perfin dies.

### King George VI - Definitive issue (low values).

#### Printing details

Printed in photogravure by Harrison & Sons, in sheets of 240, 20 rows of 12.

The first three values in the series were issued a few days ahead of the Coronation of King George VI, with the bulk of the rest issued progressively over a period of two years. There was one late-comer, the 11d plum, which appeared late in 1947.

#### Type Q1 - Edmund Dulac (head), and Eric Gill (frames). Value in a circle.

#### Type Q2 - Edmund Dulac (head), and Eric Gill (frames). No circle around value.

**King George VI - Definitive issue (high values).****Printing details**

Recess-printed by Waterlow & Sons. Issued in sheets of 40 (5 rows of 8). Only the 10/- stamp was printed in a single pane of 40, the other values were printed in two panes of 40 and then guillotined.

**Designers**

- **Edmund Dulac** for the 2/6d and 5/- values.
- **George R Bellew** for the 10/- and £1 values.

Once all the low values had been issued (by May 1939), except for the 11d plum, the high value series began to appear, again progressively. Eventually there were four denominations which used two basic designs, and two changes of colour. The first to be issued was the 10/- Dark blue, followed by the 5/- Red, and one day after the outbreak of WWII, the 2/6d Brown. Colour change replacements in 1942 saw the introduction of the 2/6d Yellow-green, and the 10/- Ultramarine. Again, there was a late-comer to the series in the shape of the £1 which was not introduced until 1<sup>st</sup> October 1948, the day after the £1 Royal Silver Wedding stamp was withdrawn from sale. All four values were replaced on 1<sup>st</sup> May 1951 when the 'Festival' high values were issued.

Note: There are **4 dies** where a 2/6d stamp is known, but the colour (brown or green) is unknown. There are also **4 dies** where a 10/- stamp is known, but the precise colour (dark blue or ultramarine) is unknown.

**King George VI - Definitive issue (low values) - Changed colours.**

2-10-1950

A change in colour for the 4d from Grey-green to Ultramarine was the first to come into effect in October 1950. The other five values all followed on the same day, 3<sup>rd</sup> May 1951. On that same day a new series of high value stamps was also introduced, along with two commemoratives to celebrate the opening of the 'Festival of Britain'. What a day that was for philatelists!

SG493 - 1 die

## Late Use of Sloper Wartime Provisionals.

Over a period of time 'Standard' dies were made to satisfy orders from customers rather than employ the time consuming technique of using single letters and/or groups of letters to produce the desired set of initials. No doubt, demand played a part in deciding which dies would be replaced sooner than others. In the absence of dated material, a Sloper Wartime Provisional will have by default a start date of 1941, and an end date of 1945.

Just for the record, the earliest known date on a SWP is **15<sup>th</sup> May 1941** on "NB/IC<sup>0</sup>" (N0350.04p). Sloper's Works in Budge Row (where stamp perforation was carried out) was 'Blitzed' during one of the many air raids on London carried out by the Luftwaffe. The air raid in question took place on the night of the 10th May 1941 and into the early hours of the next morning, resulting in the loss of virtually all of Sloper's 'in house' perforating dies.

However, dated material proves that the SWP technique of using multiple dies to create the desired set of initials continued in a few cases into the early 1950s. The stamps usually found with Sloper Wartime Provisionals are the King George VI dark colours and high values (Issue 'Q'), and the King George VI light colours (Issue 'R'), but the rare appearance on King George VI changed colours (Issue 'S', issued 1<sup>st</sup> May 1951), proves use into the early 1950's.

The following are known with **latest dates in the 1950's**:

S0500.01p	S/B	10 Jan 1950	L4980.01p	L/SC	16 Jan 1951
L4190.01p	LN/S	2 Feb 1950	S3400.01p	S/H	8 June 1951
A5170.01p	AS/P	7 June 1950	R5270.01p	RT/F	9 Sep 1951
U0400.01ap	UC/C	2 Oct 1950	K0300.01p	K/CC	3 July 1952

This piece postmarked St Helens, Lancs, **8 JUN/1951**, shows a 1d 'R' with "SH" (S3360.01M) accompanied by a 1/2d 'R' with "S/H" (S3400.01p).

The following are known on **Issue 'S'**, showing use in **1951 or later**:

A1300.03ap	A/&C <sup>0</sup>	1½d
K0300.03p	K/CC	½d, 1½d, 2½d
